### 4. Query:

- a. After completing all selections and entering the date, click the "Confirm" button.
- b. The system will fetch and display the match results for the specified date.

## TroubleShooting

- The Chromedriver version and the Google Chrome version have to be the same, set to the most daily. It will be enough for the user to update the current Google chrome version, it was added to the setup file because the automatic download of the Chrome driver leads to a version conflict
- **Very important:** When the program is installed in the C/Programfiles directory, the administrator permission is required to create a CSV file, so the data cannot be pulled and saved if you install the program on the desktop, there will be no problems. If you install program in the C files you can open the program using “Run as administrator” .
